# ChaseVGM Discord Bot Overview
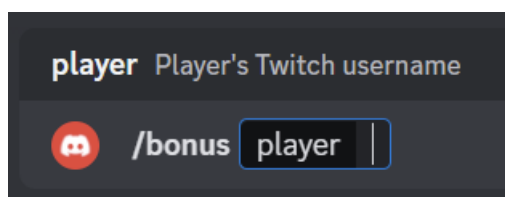

Using a Command

Uses slash commands.
To use, enter a "/" in the chatbox

You'll be prompted with a list of all available commands.
This has tab autocompletion, or you can just click the command.

You'll then be prompted to enter the `player` you wish to search for

This player name is **case insensitive**
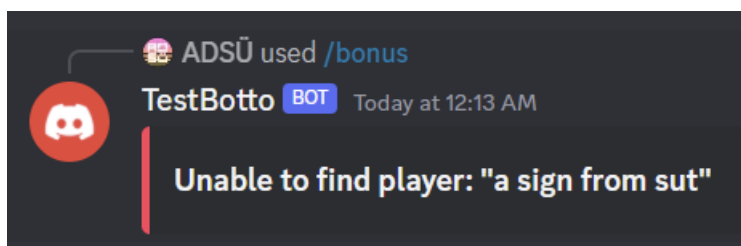

> ⓘ **Chaser Aliases**
>
> Chasers can use their aliases. Eg: "Aakadarr" shows data for "The Collector".
> This handles knockons, like adding the unspent points from the Player row to the Chaser row.

> ⓘ **Discord ID Registration**
>
> If a user has their Discord ID registered on the scoreboard, they will also be able to immediately collect their own data if they leave the `player` field blank.

Error Handling

If the `player` field has an invalid input, the following error will show:

> ✏️ **Other Errors**
>
> Some commands will have their own specific error instances.
> Those will be mentioned in their own category.
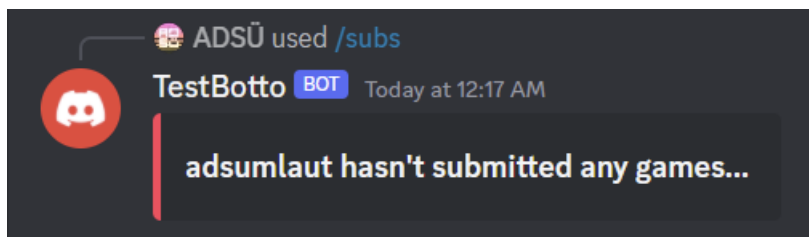

Current Commands

`/subs <name>` - Show List of Submissions

Micro Submissions are denotes wit the Ⓜ emoji

If a player has yet to submit any games, the following message is shown

`/balance <name>` - Show Total Spendable Points

A player's balance is the total points that a player can spend on votes.

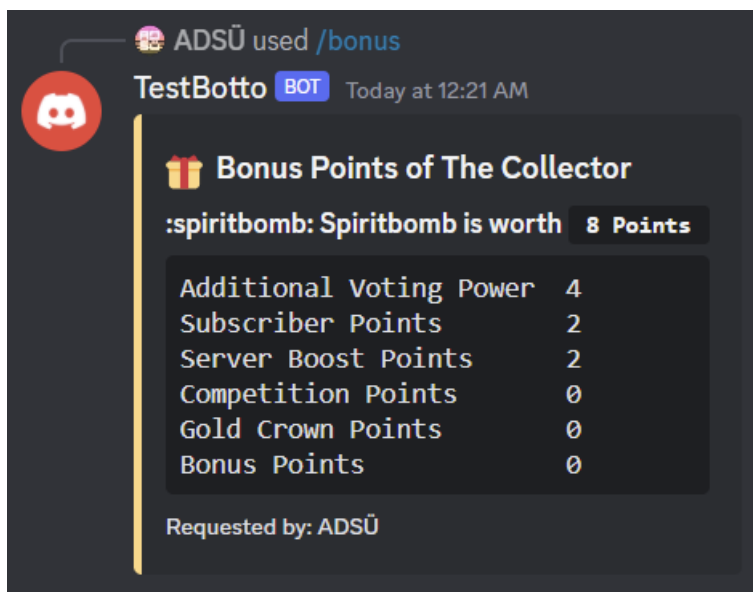

`/spiritbomb <name>` - Show Spiritbomb Power

A Spiritbomb is the sum of all **bonus** point categories.

Note that server emotes will display properly on the Chase server

## `/bonus <name>` - Show Table of Bonus Points

Table of all Bonus Point categories, also includes the value of the player's Spiritbomb.

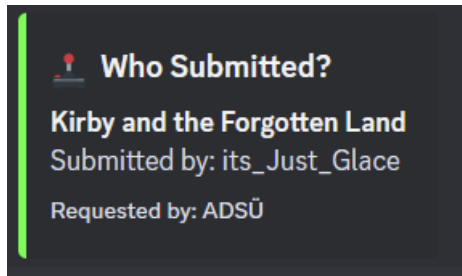

`/who_subbed <game>` - Show Who Submitted a Selected Game

This command is unique in the sense that it uses **view components**. More on that in "Ambiguous Query"
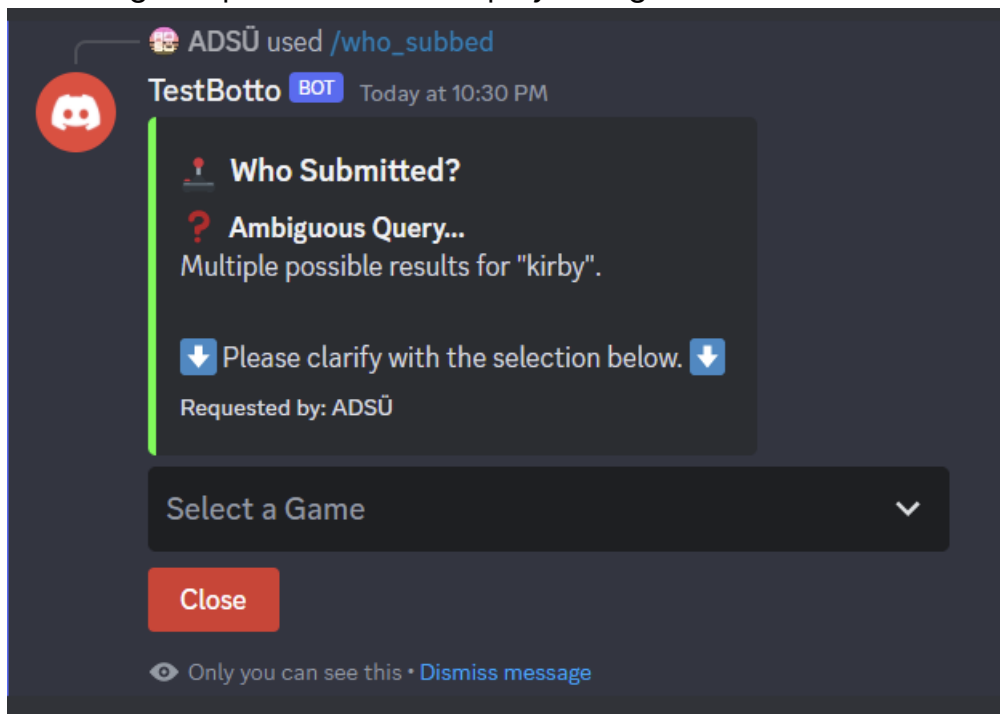

Entering the command

The response

Ambiguous Query

If the entered `game` returns **more than one** match, it's considered an **ambiguous query**.
The bot will respond with an ephemeral message (one only the command user can see)
that contains a dropdown.
Selecting an option will then display that games submitter as shown above.

Too Many Matches

Miru dropdowns can **only store a maximum of 25 items**.
As a result, I've added a warning that the query the user is looking for is too vague

Legacy Submissions

Obviously, these don't have submitters. The following message is displayed
